

# Transportation Asset Management Webinar Series

## Webinar 73

# Expanded Asset Classes in TAMPs

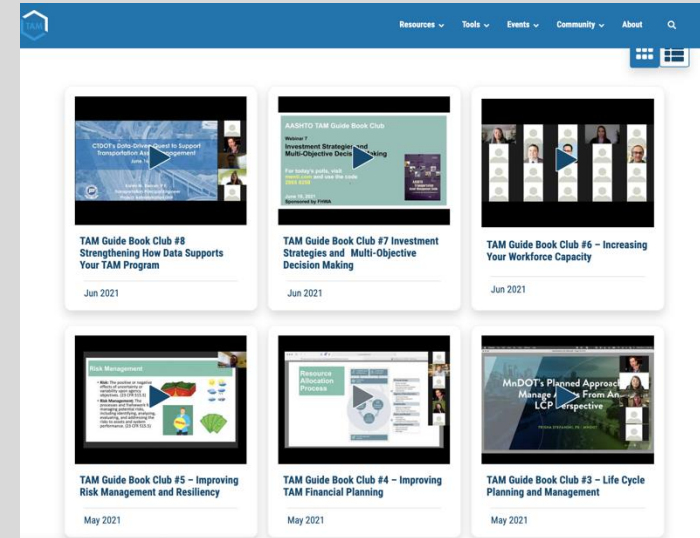

Sponsored by FHWA and AASHTO

February 19, 2025

# FHWA/AASHTO Asset Management Webinar Series

- This is the 73rd in a webinar series that has been running since 2012
- Webinars are held every two months, on topics such as off-system assets, asset management plans, asset management and risk management, and more
  - Usually, the 3rd Wednesday of the month, 2PM Eastern
- We welcome ideas for future webinar topics and presentations
- Submit your questions using Zoom's chat feature

# Welcome

---

FHWA and the AASHTO Sub-Committee on Asset Management are pleased to sponsor this webinar series

- Sharing knowledge is a critical component of advancing asset management practice
- FHWA Asset Management Hub: <https://www.fhwa.dot.gov/asset/pubs.cfm>

# Webinar Objectives

---

- Learn about how DOTs are making decisions to add asset classes other than pavements and bridges to their TAMPs.
- Highlight the work involved to include various asset classes to TAMPs and the lessons learned.
- Feature DOT plans for incorporating additional assets in 2026 TAMPs.

# Webinar Agenda

**2:00**      **Welcome, Overview, and Agenda**

Michael Johnson, California DOT  
Anna McLaughlin, AASHTO  
Hyun-A Park, Spy Pond Partners

**2:25**      **INDOT TAMP Next Assets**

Louis Feagans, Indiana DOT

**2:40**      **Expanding TAMP Assets**

Chris Whipple, Utah DOT

**2:55**      **Expanded Asset Classes in TAMPs**

Wolde Makonnen, Washington, DC DOT

**3:10**      **Q&A, Discussion and Next Steps**

Hyun-A Park, Spy Pond Partners  
Anna McLaughlin, AASHTO

INDIANA

# Asset Management Policy

The asset management policy provides the framework for INDOT staff to plan, design, finance, construct, acquire, operate, maintain, renew and dispose of INDOT's assets in a way that ensures sound stewardship of public resources while delivering quality public services:

Our Four Imperatives			
Safety First	21 <sup>st</sup> Century Workforce	Great Service	Our Investment Strategy
 <p>We will always ensure safe and sustainable asset utilization, protecting our customers and staff</p>	 <p>We will develop our workforce and align our employees around INDOT's Mission</p>	 <p>We will deliver great service, balancing the needs of our customers with available funding</p>	 <p>We will align our asset-related decision making to ensure effective delivery of our 20 year Road and Bridge Plan</p>
INDOT's Asset Management Principles			
Forward-Looking and Sustainable		Continually Improving	
 <p>We will incorporate social, legislative, environmental and financial considerations into decisions, taking into account present and future service commitments and giving due attention to the long-term stewardship of assets.</p>	 <p>We will make continual improvement a key part of our asset management approach, with a focus on driving innovation through the development of tools, techniques and solutions.</p>		
Making Robust, Repeatable & Transparent Decisions		Life-Cycle Cost Perspective	
 <p>We will utilize a formal but scalable, consistent, and repeatable approach to manage infrastructure assets - enabling services to be provided in the most efficient and cost effective manner. We will collect, collate, control and circulate the right asset information, at the right time, informing the right asset management decisions.</p>	 <p>We will take an integrated "big picture" approach to asset management that considers the combined impact of all aspects of the asset life-cycle within the control of INDOT - acquiring, operating, maintaining, renewing and retiring assets. New assets will not be constructed/ acquired without considering future operating and maintenance costs.</p>		
Risk-Based and Optimal		People-Focused (Customers & Staff)	
 <p>We will direct resources &amp; expenditures to achieve agreed service outcomes &amp; benefits, balancing the needs of stakeholders and customers with available funding - at an acceptable level of risk. We will manage our assets in terms of their role and value within their full system context, promoting reliability of the transportation system, as opposed to managing individual assets and business processes in isolation.</p>	 <p>We will adopt a customer-focused approach to managing our assets, only accommodating additional demand for services when considering the impacts to our current Levels of Service. We will recruit, train and retain the right staff and work with our university and trade school partners to ensure we develop the best workforce.</p>		

# Goals for Improving the TAMP

1

Introduce ***consistency, transparency, and defensibility*** into all aspects of the Asset Planning Process

2

Provide Departments with the ***tools needed to identify priorities*** and make smart recommendations

3

Provide Senior Management with the confidence that the ***“best” program*** is being put forward.

# Why Add Other Assets To The TAMP

---

1

There is more than Pavement and Bridges in Transportation

2

Improve scopes and project estimates

3

Aid in determining funding needs for the future

# Indiana NHS Routes

# Indiana Local NHS Routes

# Indiana NHS Routes Mileage

State System	Centerline Miles	Lane Miles
Interstate	1,367	5,863
US Highways	1,771	5,338
State Roads	622	1,911
Total	3,760	13,112

Local System	Centerline Miles	Lane Miles
County Road	10	36
City Street	31	114
Total	41	150

# 2022 INDOT Add INDOT's Large Culvert

- A large culvert is defined as any culvert with a span of 48 inches or more.
- Includes large culverts in all of its analysis (life cycle cost planning, risk management, and financial planning).
- INDOT owns and maintains 8,696 large culverts
  - 3,347 are on the NHS

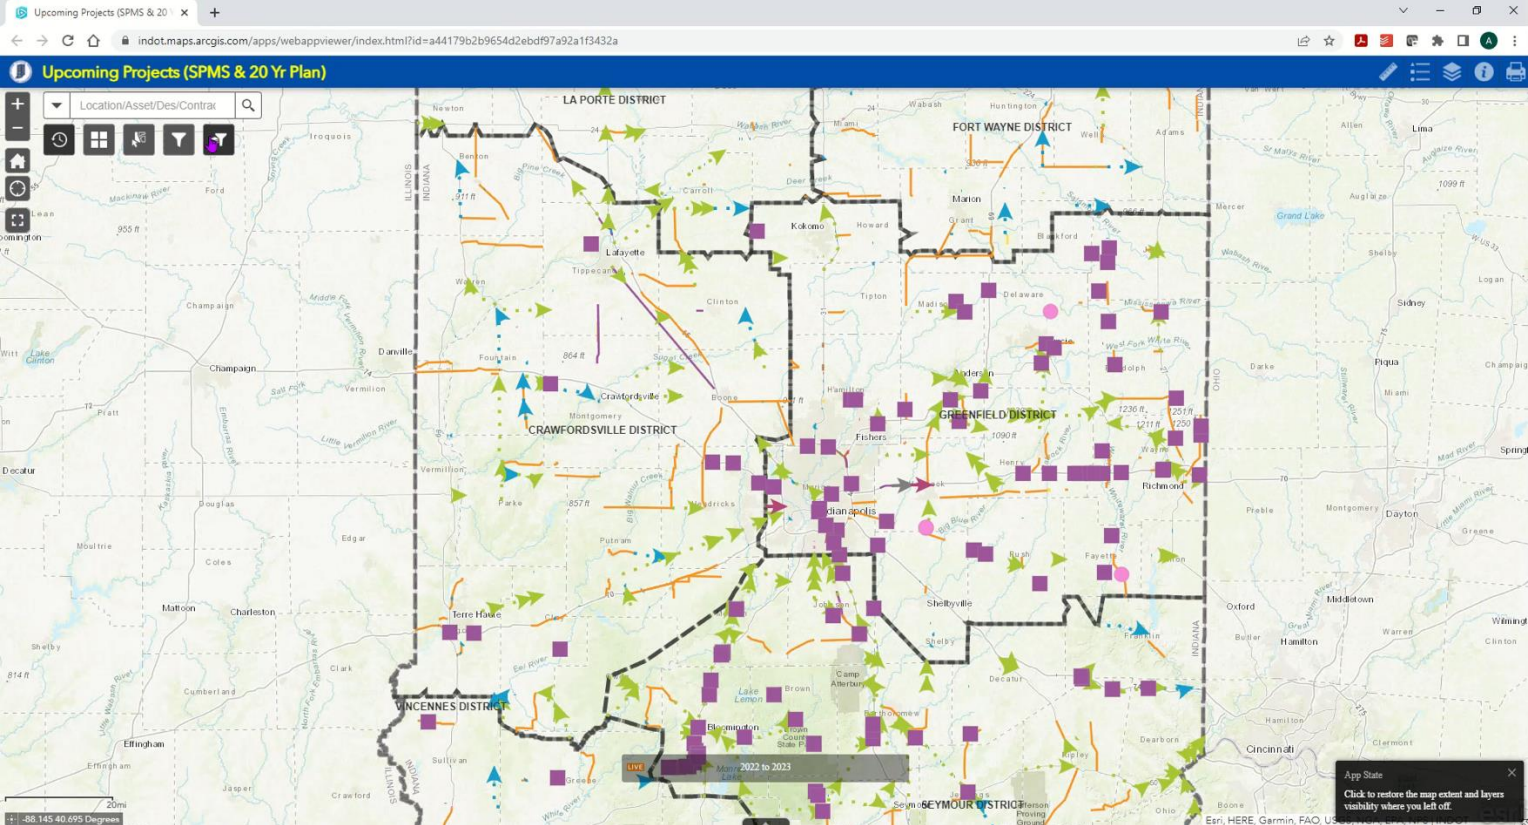

# Next Level of Assets Selection

- Culverts
- Small Culverts/Pipes
- MSE Walls
- Over Head Signs
- Noise Walls
- Lighting
- ADA
- ITS items
  - Signals
  - Signs
  - Traffic Mobility

# 20 Year Plan Video

# Proposed Workflow for Updating 20-yr Plan: Any Asset

**Identify:** Asset Engineer accesses the relevant custom web app (map) on ArcGIS Online to find their relevant asset.

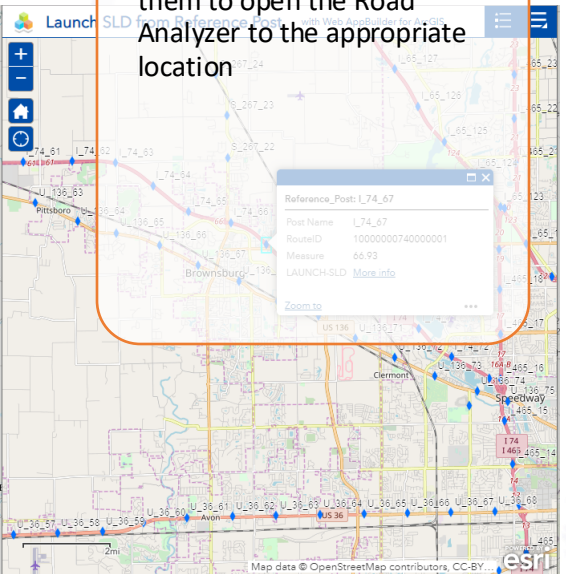

**Analyze:** Road Analyzer allows the user to view information related to their asset as well as other relevant information

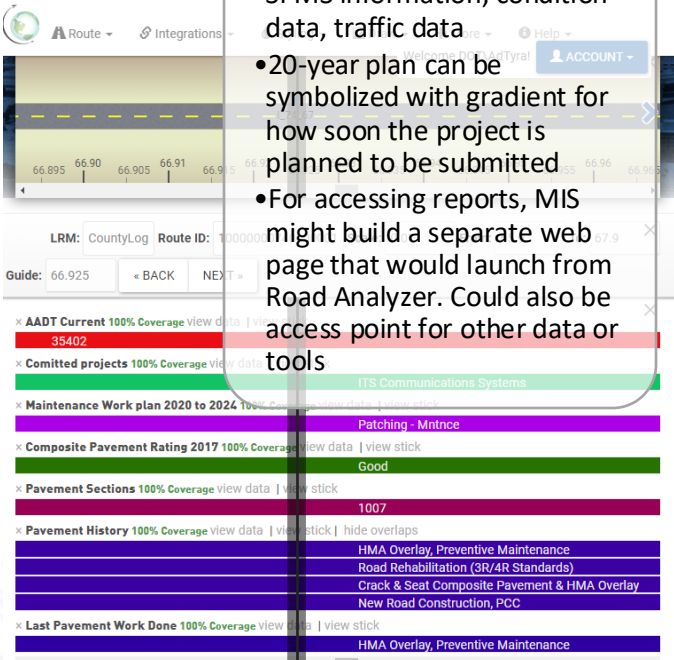

**Edit:** RCE can be launched from Road Analyzer for edits (single edit or multiple concurrent)

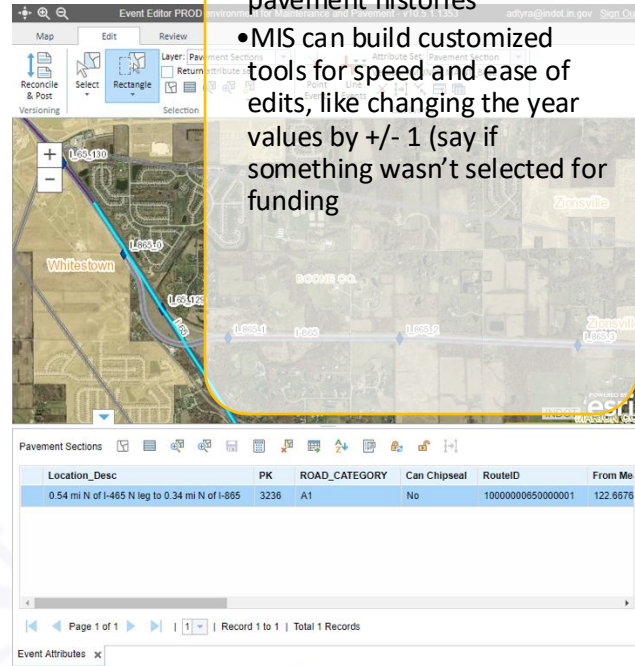

- They can search for them either using the search bar or by finding it on the map
- Selecting an asset will allow them to open the Road Analyzer to the appropriate location

- Can include 20-year plan for their asset and other assets, SPMS information, condition data, traffic data
- 20-year plan can be symbolized with gradient for how soon the project is planned to be submitted
- For accessing reports, MIS might build a separate web page that would launch from Road Analyzer. Could also be access point for other data or tools

- Edits would be made the same way as other data like pavement histories
- MIS can build customized tools for speed and ease of edits, like changing the year values by +/- 1 (say if something wasn't selected for funding)

# Advantages for Centralized 20-year plans

# Project Scoping Application Overview

- INDOT has developed a project scoping application to develop scopes for bridge and pavement projects
  - Reduce data entry time
  - Improve the accuracy of data going into SPMS

## Project Scoping Application

- Collector Application on iPad
  - Field notes, pictures, geo-located
  - Programmed projects visible

## collect field notes

A screenshot of the Indiana Department of Transportation Project Scoping Application web interface. The interface is a web browser window showing a project details page. The header includes the Indiana Department of Transportation logo and the text "INDOT Project Scoping Application Bridge / Large Culverts Information". The main content area shows a progress bar with stages: Not Started, In Progress, Prepared, Signed, Approved, and Retracted. Below the progress bar, there are several sections of data, including "Bridge Scoping Application, model run date: 2/22/2020", "Bridge Project Details", and "Bridge Attributes".

Approach	Definition	Inventory	Maint. Cycle	Condition Data	Long-Term PM	Optimize Lifecycle
Performance Driven Plus	Asset condition is routinely monitored and modeled. Actions are taken proactively and reactively to optimize the asset lifecycle through minimum lifecycle cost, maximum benefit, maximum lifecycle length, or some similar approach.	o	o	o	o	o
Performance Driven	Asset condition is routinely monitored and actions are taken to manage the long-term performance of the asset based on system performance.	o	o	o	o	
Interval Driven Plus	Activities are scheduled at specific time intervals based on analysis and deterioration, where the inspection and maintenance activities are performed simultaneously to collect condition data for analysis.	o	o	o		
Interval Driven	Activities are scheduled at specific time intervals based on analysis and deterioration. Condition data may be collected on these assets to meet other business needs, but inspection cycle is managed separately from the maintenance cycle.	o	o			
Reactive	An inventory is maintained, but there is no regular condition data collection and no maintenance performed to slow or address deterioration until an asset is reported as having an unacceptable defect. Annual work is planned at the aggregate level with concern for the specific locations of potential defects.	o				
Minimum Maintenance	No inventory or data collection is collected or maintained. Maintenance is performed when assets are identified as having an unacceptable defect.					

# developing asset maturity

---

Determine the **decisions** and what data is needed.

**Evaluate the need** for and level of asset data required  
(condition, interval, or reactive).

**Use your available resources** (grants, research, other  
asset groups) to **prioritize inspection**.

Determine **initial deterioration rates** and **inspection  
frequency**, based on risk and resources.

Define the **data to be collected** and **where** to store it.

Gather most of the **data in design/construction**.

**Automate and optimize** collection and analysis.

Document the **benefit and need**.

# improved communication

---

**TAM Webinar 73:**  
Expanded Asset Classes in TAMPs

February 19, 2025

District Department of Transportation

# OUTLINE

---

- **d.** TAMP
- Ancillary assets
  - **d.** TAMP 2022
    - Initial efforts
  - Expanded assets in 2026 and beyond

## d. TAMPs

- The first complete d. TAMP was initially developed and certified in 2019
  - TAMP minimum requirements
    - NHS pavement and bridges
    - Inventory, Condition
    - LCP, Investment Strategies
    - Financial Plan, Risk management
- 2022
  - TAMP minimum requirements
  - BIL and Extreme Weather requirements
  - Refined processes
  - **Other Assets**

### OTHER ASSETS

- Other than pavement and bridges, major assets managed by d. include:
  - Sidewalks and curb & gutter – approximately 1,496 miles
  - Alleys – approximately 365 miles
  - Tunnels – 15
  - Culverts (some categorized as bridge)
  - Retaining walls
  - Overhead sign structures
  - Guardrails & attenuators
  - Green infrastructure
  - Trees
  - Streetlights & traffic signals

#### Others:

- Street Signs
- Traffic bollards/flexiposts, pavement marking, parking meters, bike lanes, bus stop islands...

## ASSET MANAGEMENT & TAMP NEEDS

### The Basic:

- Inventory & Condition -
  - Data, how much data
  - How detailed, how old, how often data is collected
  - Database, data/asset management systems
- Maintenance Program -
  - Work and maintenance information
    - Past work completed/data
  - Work plan (& prioritization processes)
- Financial Information -
  - How much money spent and how much accomplished with \$\$

### More for AM:

- Data and performance analysis -
  - Asset performance, target setting, decision trees
  - Life-cycle planning and risk management
  - Budget/Investment scenarios
    - Planned budget (is there dedicated funding?)

# Expanded Asset Classes - d. TAMP

## d. APPROACH

- Agencywide Outreach
  - Asset owners within various departments, agencywide
- Asset readiness Assessment
  - Gather information
  - Information and gap analysis → asset maturity evaluation

*Example of a preliminary sample asset register*

	A	B	C	D	E	F	G

18	Parking Meters	Yes	Yes	Yes		Pt	<a href="https://maps2.dcgis.dc.gov">https://maps2.dcgis.dc.gov</a>
19							
20							
21							

### d. CORE INFRASTRUCTURE

- Before the recent restructuring, the AM division managed the inventory, condition and maintenance of Core Assets, *i.e. pavement, bridges, sidewalks, alleys, tunnels, (plus guiderails and attenuators), and the TAMP.*
  - Good Inventory data for sidewalks, alleys, tunnels and guardrails
  - Condition data – survey not performed as frequently
    - Condition database is updated when work is completed at a location;
    - Data is still used to prioritize and plan work locations
  - Worst first approach focused on sidewalks and alleys rated ‘Poor’
  - Also includes Reactive maintenance program to respond to safety issues and Service Requests (trip hazards, loose bricks or cracked sidewalks)

**\*\* Significant Investment on sidewalks and alleys by Mayor Bowser past 6-7 years \*\***

### Maintenance Strategies

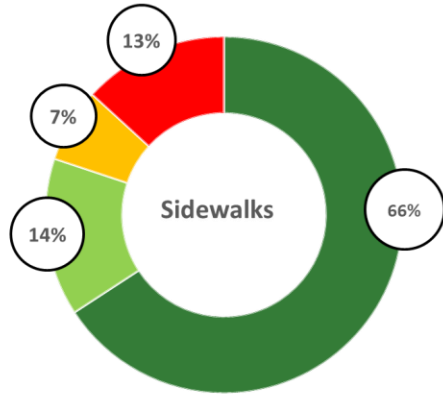

Maintenance Strategy	Description
Condition-based maintenance	Used for assets that require routine condition monitoring, predictable failure modes using condition forecasting models
Interval-based maintenance	Routine/regularly scheduled type maintenance
Reactive-based maintenance	Used for Service requests, or noncritical assets/components, inconsequential, or redundant items.

- *Note that some assets may combine various maintenance strategies*

# Sidewalks - d. TAMP

Sidewalk condition in 2024 (year of last survey after 2018)

Sidewalk Network Forecast (average \$25Mil/year)

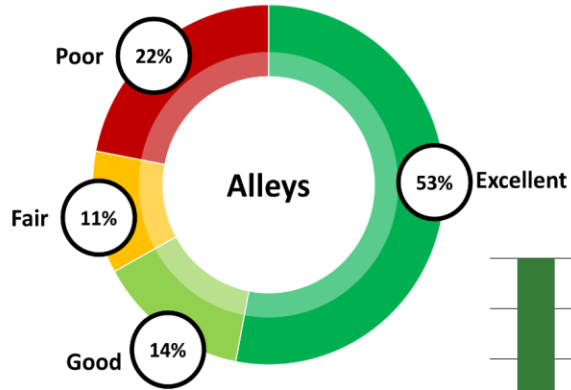

# Expanded Asset Classes - d. TAMP

## *Sidewalks - AM Assessment*

Maintenance Strategy	Process/Task	Supporting Data	Level of Need (Essential/Desirable)	Data Availability (Completeness)	
Condition & Reactive-based	Inventory assessment	Asset/component inventory	Essential	Excellent – data is available and complete	
	Condition assessment	Historical condition	Desirable	Adequate - data is somewhat available but not complete	
	Performance assessment	Performance data (measures, goals, and targets)	Essential	Adequate – data is somewhat available but not complete	
	Analysis & forecasting	Treatment strategies and benefits		Essential	Good – data is available
		Deterioration rates		Desirable	Poor – Data is not available
		Work type cost		Essential	Good – data is available
		Decision trees		Desirable	Good – data is available
		Analysis tools or processes		Desirable	Poor – Data is not available

# Alleys - d. TAMP

Alleys condition in 2018 (year of last survey)

Alleys Network Forecast (average \$15Mil/year)

# Expanded Asset Classes - d. TAMP

## *Alleys - AM Assessment*

Maintenance Strategy	Process/Task	Supporting Data	Level of Need (Essential/Desirable)	Data Availability (Completeness)	
Condition-based	Inventory assessment	Asset/component inventory	Essential	Excellent – data is available and complete	
	Condition assessment	Historical condition	Essential	Adequate - data is somewhat available but not complete	
	Performance assessment	Performance data (measures, goals, and targets)	Essential	Adequate – data is somewhat available but not complete	
	Analysis & forecasting	Treatment strategies and benefits		Essential	Good – Data is available
				Desirable	Poor – Data is not available
				Essential	Good – Data is available
				Desirable	Good – Data is available
				Essential	Poor – Data is not available

## TUNNELS

- Good inventory and condition data overall
- Tunnels consist of various components
  - A combination of Condition/Interval/Reactive based approaches exist
  - Some components, follow manufacturer's maintenance guidelines
- Need more analysis on each component to perform:
  - LCP, deterioration rates
  - Each component may require its own AM and maintenance strategy
- Translate that for the whole tunnel structure

## *Tunnels: Equipment and Recommended Maintenance Approach*

Equipment/System	Condition Based	Interval Based	Reactive Based
Structural components	Preferred	Feasible	Not recommended
Lighting	Feasible	Feasible	Preferred
Ventilation equipment	Preferred	Feasible	Not recommended
Filtering and pumping stations	Preferred	Feasible	Not recommended
Tunnel environment sensors	Preferred	Feasible	Not recommended
Fire detection and extinguishing system	Feasible	Preferred	Not recommended
CCTV system	Feasible	Preferred	Feasible
Emergency exits	Preferred	Feasible	Feasible
Traffic management equipment	Feasible	Preferred	Feasible
Automatic accident detection	Preferred	Feasible	Feasible
Communication systems (SOS, loudspeaker, telephone)	Preferred	Feasible	Feasible

## Next steps - d. TAMP

---

- Further data analysis needed for LCP and to develop deterioration rates
  - Performance/Lifecycle Plan/Maintenance needs
  - Concrete vs. brick vs. other materials
    - Tree roots damage (short life) and flexipave performance

Brick Sidewalk – damage by tree roots

Flexipave

## Next steps - d. TAMP

- Further data analysis needed for LCP and to develop deterioration rates
  - Performance/Lifecycle Plan/Maintenance needs
  - Concrete vs. brick vs. other materials

Concrete Sidewalks: horizontal cutting

Alleys and sidewalks – special materials

### TAMP Implementation

- General TAMP communication and education, AM practice
  - Outreach to asset owners
- Assets TAM maturity evaluation
  - Data availability (the basic and more)
  - Further data analysis (inventory, condition, completeness, quality, financial)
  - Maintenance program and work plan strategies
- Update assets register to include more than the basic (inspection cycle, performance and targets need, Life-cycle plan and maintenance/replacement strategy...)
- Technology and leveraging on available systems for better AM
  - GIS
  - Asset Management systems

## Next steps - **d.** TAMP

- Executive Management
  - Information for data driven decision making, prioritization

*DC Mayor Bowser at Budget Oversight Hearing on streets, sidewalks and alleys – **d.** analysis and charts were instrumental in securing investment on core infrastructure by the Mayor.*

- Resource needs
