Transportation Asset Management Webinar Series Webinar 74

Life Cycle Planning

Sponsored by FHWA and AASHTO

April 16th, 2025

FHWA/AASHTO Asset Management Webinar Series

- This is the 74th in a webinar series that has been running since 2012
- Webinars are held every two months, on topics such as off-system assets, asset management plans, asset and risk management, and more

 Usually, the 3rd Wednesday of the month, 2PM Eastern
- We welcome ideas for future webinar topics and presentations
- Submit your questions using Zoom's chat feature

Welcome

FHWA and the AASHTO Subcommittee on Asset Management are pleased to sponsor this webinar series

- Sharing knowledge is a critical component of advancing asset management practice
- FHWA Asset Management Hub: <u>https://www.fhwa.dot.gov/asset/pubs.cfm</u>

Webinar Objectives

- Learn about how DOTs can shift from an Age-Based State of Good Repair metric to a Component Condition-Based SOGR.
- Highlighting the need for resilience in transportation planning and the corresponding adaptive design criteria for at-risk infrastructure.
- Feature DOT plans to develop risk registers to manage assets in climate vulnerable areas.

Webinar Agenda

- 2:00 Welcome, Overview, and Agenda Justin Bruner, AASHTO AM Subcommittee Tashia Clemons, FHWA Hyun-A Park, Spy Pond Partners
- 2:15 Component Condition-Based Traffic Signals Asset Management Program Miguel Simon, Connecticut Department of Transportation
- 2:35 Lifecycle Planning for Pavement and Bridge Assets at the Washington State DOT

Matt Versdahl, Washington State Department of Transportation

- 2:55 Resilient Transportation Systems Maria Mutuc, Virginia Department of Transportation
- **3:15Q&A, Discussion and Next Steps**Hyun-A Park, Spy Pond Partners

Component Condition-Based Traffic Signals Asset Management Program

Miguel Simon – Asset Management Group Connecticut Department of Transportation

April 16, 2025

Agenda

- CTDOT TAM Program
- Traffic Signals Asset History
- State of Good Repair
- Traffic Signal Components
- Traffic Signal Dashboard
- Lessons Learned

CTDOT TAM Program

CTDO

Traffic Signals Asset History

- Traffic Signals were included in CTDOT's first TAMP in 2018
- State of Good Repair based on age of structure (mast arm or span pole) from 2018-2024
- Component conditionbased State of Good Repair implemented in 2024

Traffic Signals Asset History

Why Shift to Component Condition-Based Approach?

- Age alone does not fully represent asset condition.
- Components have varying lifespans.
- Additional Traffic Signal management enhancements (electronic maintenance forms, online dashboard)

History

Comparing State Of Good Repair Approaches

Age-Based State of Good Repair

Age of signal structure

- 0-15 years Good Signal Condition
- 16-25 years Fair Signal Condition
- 26+ years Poor Signal Condition

Component Condition-Based State of Good Repair

Four components inspected and each assigned a State of Good Repair rating that rolls up to an overall condition rating identified using a matrix.

Lifecycle Planning for Pavement and Bridge Assets at the Washington State DOT

Matt Versdahl, Statewide Asset Manager, Washington State DOT

April 16, 2025

- Integrating Risk and Resilience into LCP
- Assets in Climate Vulnerable Areas

What is Lifecycle Planning at WSDOT?

- Considerations from construction to disposal
- Goal: Minimize long-term costs while maintaining performance
- Helps prioritize investments and set preservation strategies

Why It Matters in Washington

Climate, geography, and usage vary widely as well as volume.

Lifecycle Cost Components

- Initial Construction
- Routine Maintenance
- Rehabilitation
- Operation Costs
- End-of-Life Costs

How WSDOT does it

- WSDOT Pavement Management System (WSPMS)
- Bridge Engineering Information System (BEISt)
 - Condition, deterioration models, maintenance data, treatment costs, inflation and discount rates, anticipated budgets
- Pavement assets managed according to general type of material (flexible or rigid).

- LCCA compares long-term costs of asset strategies
- Uses Equivalent Uniform Annual Cost (EUAC)
- Supports decisions like choosing pavement type
 - Analysis of alternatives conducted

• Example of project level analysis:

Costs	A	Alternative 1		Alternative 2
ROW	\$	100,000.00	\$	100,000.00

Exhibit 4-5: WSDOT Bridge Treatment Options

Management Strategy ^{3,4}	Work Type ^{3,4}	Life Extension ² (Years)	Total 10 Year Needs ¹ (\$ in millions)
Maintenance: Day-to-day temporary maintenance repairs keeping bridges in service. Bridge Cleaning Program: Intended to keep structure coatings free of debris buildup and extend the life of the coating.	 Minor Repair: Clean fracture critical steel bridges prior to inspection Deck Patching & crack sealing Small movement expansion joints 	1 to 3	Current backlog of Repairs #: 1,045 Cost: \$12
Steel Bridge Painting Program: Intended to perform work when it's due to prevent corrosion, extend service life, and keep the bridge in fair or better condition.	 Steel element preservation: Remove existing paint Apply new paint system 	Steel Truss: 20 to 25 Steel Girder: 30 to 40	Structures #: 184 Cost: \$ 781.1
Concrete Deck Overlay Program: Intended to repair and overlay concrete decks to provide corrosion protection for steel reinforcing and roadway surface, prolong service life, and avoid expensive replacements.	Concrete Deck Repair and Overlay: • Hydro-Milling of the deck • Deck repair and overlay: - Hydro-mill deck surface (1") - Apply modified concrete - Polyester Concrete	25 to 30	Structures #: 303 Cost: \$867.9
Bridge Scour Mitigation Program: Mitigate risk of bridge failure by designing, permitting, and constructing bridge scour repairs under contract. Top 20-30 candidates will be addressed over the next 10 years.	 Retrofit: Protect foundations with rip-rap Install barbs in river to channel river flow Repair voids under footings and pilings with concrete fill 	N/A	Structures #: 268 Cost \$: N/A Included in rehabilitation & reconstruction total. \$30
Bridge Seismic Retrofit Program: Intended to address bridges not meeting current seismic design standards. WSDOT will address highest priorities on Interstate and selected state routes in the central Puget Sound Area	 Retrofit: Concrete columns with steel or composite material Strengthen existing crossbeams with new bolsters Address abutments/intermediate piers with girder stops between girders 	N/A	Structures #: 593 *Includes partial retrofits Cost \$: N/A Included in rehabilitation & reconstruction total.
Element Repair and Replacement: Repair and replace specific deteriorated bridge elements, performing major preservation repairs to improve low condition ratings.	Element repair: • Anchor cables • Expansion joints • Other bridge elements • Mechanical elements • Concrete columns	Up to 25	Structures #: 94
Reconstruction: Replace or rehabilitate bridges in poor condition. An evaluation of rehabilitation option is compared to full bridge replacement. If rehabilitation costs exceed 60% of new bridge, then bridge replacement is recommended.	 Replace/Rehabilitate: Selected timber bridges Replace selected steel and concrete bridges in poor condition Replace selected concrete bridge deck 	New Bridge: 75+	Cost⁵ \$: 589.7

Risk Management

- Enterprise
- Network
- Project
- Risks are ranked and considered in treatment plans and rehab activities
 - Helps to optimize strategy
- Workshop style approach to developing risk registers

Exhibit 5-5:	Summary of	Pavement As	set Risk Ma	nagement for l	Pavement ⁻	Freatment Im	pacts
				<u> </u>			•

Consideration	Pavement Treatment
Risk Statement and Impact	If pavement projects are not programmed at the correct time, then life-cycle costs might increase.
Asset Risk Category	Operational
Level of Risk	High
Risk Treatment Strategy	Mitigation
Current Strategy	To support the implementation of strategic maintenance, WSDOT has an integrated approach that influences the timing and requirements of when future paving projects occur, maximizing the pavement life before a more intensive treatment option is selected. As part of the overarching investment strategies for pavements, WSDOT is actively engaged in implementing Lowest Lifecycle cost strategies. The pavement office also has well documented asset management practices as communicated in the pavement manual. Pavement performance is actively monitored through performance measures established in the <u>Gray Notebook</u> .
Risk Treatment Plan	Improve procedures to make project programming more accurate. More time needs to be spent reviewing the program of projects for completeness and accurate timing.
Anticipated Level of Risk Post Treatment	High

Consideration	Preventive Maintenance Strategy
Risk Statement and Impact	If the preventive maintenance strategy is not effectively implemented, then early resurfacing or reconstruction may need to occur, increasing life-cycle costs.
Asset Risk Category	Operational
Level of Risk	High
Risk Treatment Strategy	Mitigation
Current Strategy	The Pavement office works closely with Headquarters and Region maintenance staff to train and identify best practices for <u>pavement strategic maintenance</u> . This is to ensure the most effective implementation of strategic maintenance.
	Training consists of pavement deterioration identification, appropriate treatment types, and root cause analysis. Maintenance crews also provides feedback on effectiveness of treatment options and successes and challenges experienced in the field. The Pavement office also works to promote consistent implementation of strategies across the Regions.
Risk Treatment Plan	Develop a single approach and implementation strategy that is consistent across Regions. Identify the scenarios and root causes of why strategies were not effective. The effectiveness of a strategy such as risk treatment is measured through pavement life extension.
Anticipated Level of Risk Post Treatment	Medium

Exhibit 5-6: Summary of Pavement Asset Risk Management for Preventive Maintenance Strategy Impacts

- Bridge
 - Scour mitigation
 - Seismic retrofits
 - Preventative maintenance
 - Painting
 - Deck repair modified concrete overlays
 - Rehab vs. replacement

- May include extreme weather and resilience
 - Sea Level Rise
 - Precipitation
 - Temperature
 - Fire
 - Seismic
- Transportation Resilience Improvement Plan (underway)

Climate Impacts Vulnerability Assessment

Very low to low	ry low to low Moderate Critical to Very Critical				
1 2 3	4 5 6	7 8 9 10			
	Criticality of asset				
Notice that along with the qualitative terms there is an associated scale of 1 to 10, this is to serve as a facilitation tool for some people who may find it useful to think in terms of a numerical scale – although the scoring by each individual is of course subjective. The scale is a generic scale of criticality where "1" is very low (least critical) and "10" is very critical.					
Typically involves: non-NHS low AADT alternate routes available	Typically involves: some NHS non-NHS low to medium AAI serves as an alternative for othe state routes	Typically involves: Interstate Lifeline Some NHS sole access no alternate routes			

Exhibit 2-6 Impact – Asset Criticality Matrix or "Heat Sheet"

7 8 9 10		Complete Failure Results in total loss or ruin of asset. Asset may be available for <i>limited</i> use after at least 60 days and would require major repair or rebuild over an extended period of time. "Complete and/or catastrophic failure" typically involves: Immediate road closure Travel disruptions Vehicles forced to reroute to other roads Reduced commerce in affected areas Reduced or eliminated access to some destinations May sever some utilities. May damage drainage conveyance or storage systems.
4 5 6	5	Temporary Operational Failure Results in minor damage and/or disruption to asset. Asset would be available with either full or limited use within 60 days. "Temporary operational failure" typically involves: • Temporary road closure, hours to weeks • Reduced access to destinations served by the asset • Stranded vehicles Possible temporary utility failures.
1 2 3		Reduced Capacity Results in little or negligible impact to asset. Asset would be available with full use within 10 days and has immediate limited use still available. "Reduced capacity" typically involves: • Less convenient travel • Occasional/brief lane closures, but roads remain open • Some vehicles may move to alternate routes.

VIRGINIA

PHASE 1 DECEMBER 2021

MASTER PLAN

COASTAL RESILIENCE

VIRGINIA

FLOOD

PROTECTION

MASTER PLAN

RESILIENCE DRIVERS

Executive Orders

Commonwealth of Virginia Office of the Governor

Executive Order

NUMBER TWENTY-FOUR (2018)

INCREASING VIRGINIA'S RESILIENCE TO SEA LEVEL RISE AND NATURAL HAZARDS

Importance of the Initiative

Sea level rise, land subsidence, higher average temperatures, more frequent and intense weather events, severe drought, and increased development, have increased risk and will continue to increase and exacerbate risk from natural hazards across the Commonwealth of Virginia. The number of federally declared disasters has steadily increased nationally and in Virginia. The number has experienced a 250 percent increase in federally declared disasters over the past 20 years, including declarations for flooding, hurricanes, severe storms, and wildfire.

NUMBER FORTY-FIVE

FLOODPLAIN MANAGEMENT REQUIREMENTS AND PLANNING STANDARDS FOR STATE AGENCIES, INSTITUTIONS, AND PROPERTY

Importance of the Initiative

Executive Order 24 "Increasing Virginia's Resilience to Sea Level Rise and Natural Hazards," issued in November 2018, set the Commonwealth on a course towards addressing its risk and resilience to natural hazards, including flooding. A key element of that Order required an analysis of flooding and flood preparedness in the Commonwealth. Based on that analysis, the Commonwealth must establish new policies and directives to ensure that necessary actions are taken to protect state property from the risk of floods.

Legislation

VIRGINIA ACTS OF ASSEMBLY -- 2021 SPECIAL SESSION I

CHAPTER 51

An Act to amend and reenact §§ 33.2-214.2 and 33.2-353 of the Code of Virginia, relating to transportation projects; resiliency.

Approved March 11, 2021

Be it enacted by the General Assembly of Virginia:

1. That §§ 33.2-214.2 and 33.2-353 of the Code of Virginia are amended and reenacted as follows: § 33.2-214.2. Transparency in the development of the Six-Year Improvement Program, statewide prioritization process, and state of good repair program.

A. The Board shall develop the Six-Year Improvement Program pursuant to § 33.2-214 in a transparent manner that provides to the public, elected officials, and other stakeholders the opportunity to engage and comment in a meaningful manner prior to the adoption of such program.

B. No later than 150 days prior to a vote to include projects or strategies evaluated pursuant to § 33.2-214.1 in the Six-Year Improvement Program, the Office of Intermodal Planning and Investment shall make public, in an accessible format, (i) a recommended list of projects and strategies for inclusion in the Six-Year Improvement Program based on the results of such evaluation; (ii) the results of the screening of candidate projects and strategies, including whether such projects are located on a primary evacuation route; and (iii) whether a project has been designed to be or the project sponsor has committed that the design will be resilient; and (iv) the results of the evaluation of candidate projects

The Statewide Transportation Plan shall be updated as needed but no less than once every four years. The plan shall promote economic development and all transportation modes, intermodal connectivity, environmental quality, accessibility for people and freight, resiliency, and transportation safety.

B. The Statewide Transportation Plan shall establish goals, objectives, and priorities that cover at least a 20-year planning horizon, in accordance with federal transportation planning requirements. The plan shall include quantifiable measures and achievable goals relating to, but not limited to, congestion reduction and safety, transit and high-occupancy vehicle facility use, job-to-housing ratios, job and housing access to transit and pedestrian facilities, air quality, movement of freight by rail, and per capita vehicle miles traveled. The Board shall consider such goals in evaluating and selecting transportation improvement projects for inclusion in the Six-Year Improvement Program pursuant to § 33.2-214.
C. The plan shall incorporate the measures and goals of the approved long-range plans developed by

C. The plan shall incorporate the measures and goals of the approved long-range plans developed by the applicable regional organizations. Each such plan shall be summarized in a public document and made available to the general public upon presentation to the Governor and General Assembly.

D. It is the intent of the General Assembly that this plan assess transportation needs and assign priorities to projects on a statewide basis, avoiding the production of a plan that is an aggregation of local, district, regional, or modal plans.

2. That the Commissioner of Highways shall ensure resiliency is incorporated into the design standards for new construction projects.

Transportation Planning

Guiding Principles

[H 2071]

GP1: Optimize Return on Investments

Implement the right solution at the right price, striving to meet current needs while advancing long-term prosperity and livability.

GP2: Ensure Safety, Security, and Resiliency

Provide a transportation system that is safe for all users, responds immediately to short-term shocks such as weather events or security emergencies, and adapts effectively to long-term stressors such as sea level rise.

Table 7: VTrans 2021 Long-term Risk & Opportunity Register

Macrotrend Characterization Description

Attachment A: 2021 VTrans Strategic Actions¹

 Collect data (e.g., right-of-way mapping, precipitation, roadway elevation, etc.) to accurately assess flooding risks for state- and locally-maintained roadways that can be used to identify funding needs and prioritize investment.

- Responsible entity(s): VDOT
- Intent: This action addresses VTrans Risk & Opportunity Register Item #2: Several unknown and unquantified flooding risks are present.

 Develop policies, based on robust data collection and analysis, to ensure flooding risks are reflected in transportation asset life cycle and/or transportation project planning processes.

- Responsible entity(s): VDOT, DRPT
- Intent: This action addresses VTrans Risk & Opportunity Register Item #4: Proactively eliminate or mitigate identified flooding risks.

 Collaborate with state/regional agencies to systematically identify solutions that facilitate consistent and systematic prioritization and support the allocation of state resources to address flooding risks.

- Responsible entity(s): VDOT, DRPT
- Intent: This action addresses VTrans Risk & Opportunity Register Item #4: Proactively eliminate or mitigate identified flooding risks.

DEFINITION OF TRANSPORTATION RESILIENCE

Transportation Resilience

Resilience is the capability of a transportation project or strategy to anticipate, prepare for, respond to, or recover from significant multi hazard threats with minimum damage and disruption to the transportation network, while preserving and incorporating natural and built infrastructure that helps to mitigate these

RESILIENCE ROLES

Organizational Support for Resilience Efforts

VDOT RESILIENCE PLAN – Objectives & Strategies

1. Data Driven Decisions	Authoritative DatasetsData and Research Gaps	
2. Stakeholder Engagement	 Coordination with Federal, State, MPO, Local Initiatives 	
3. Identify At-Risk Infrastructure	 Visualization Tool (Asset and Network Vulnerability and Risk Assessment) Inform focus areas, projects 	
4. Resilience Practices	 Adaptive Design Criteria (Hydraulics, Materials, Structure and Bridge) Other Physical Enhancement Practices Natural and Nature-based Solutions Operational, Maintenance, and Emergency Management Practices Administrative and Policy Practices 	
5. Feasibility and Cost Effectiveness Analyses	Develop Benefit Cost Analysis Tools	
6. Funding Opportunities	PROTECTOther Funding Opportunities	

VDOT RESILIENCE PLAN – PDOM Integration

Figure 3. Integration of Resilience Plan Strategies into VDOT's Existing Business Practices

VDOT BUSINESS PLAN – Resilience Objectives

Virginia Department of Transportation FY2024-2026 Business Plan

Objective 3.4: Implement VDOT's Resilience Plan

VDOT will maintain and strengthen the resilience of its infrastructure, called for in the VDOT Resilience Plan that will influence the agency's construction program. The Resilience Plan is a framework to incorporate resilience into the agency's business including transportation planning, project development, delivery, operations, maintenance and emergency management.

Related Strategies

- 3.4.1 By June 2025, incorporate or enhance resilience review into design processes through accomplishment of the following key milestones:
 - Milestone 1: June 2024 Identify suite of enhanced or adaptive design criteria for further consideration.
 - Milestone 2: December 2024 Develop a methodology to determine infrastructure vulnerability.
 - Milestone 3: June 2025 Incorporate application of appropriate design criteria based on vulnerability assessment.
 - Milestone 4: June 2025 Develop or revise supporting standards, guidance documents and policies.

3.4.1 VDOT Resilience Plan Implementation Milestones

Virginia Department of Transportation FY2024-2026 Business Plan

VDOT will maintain and

strengthen the resilience

through establishment of

the strategies called for in

the VDOT Resilience Plan

agency's maintenance and

that will influence the

operations programs.

of its infrastructure

Objective 4.2: Maintain and Strengthen the Resilience of Virginia's Roadway Infrastructure Goal: Resilient Roadway Infrastructure

Related Strategies

- 4.2.1 June 2024 Identify a suite of operational and maintenance measures for further consideration.
- 4.2.2 June 2025 Adopt operational and maintenance resilience measures based on vulnerability assessment.
- 4.2.3 June 2025 Develop or revise supporting standards, guidance documents and polices to integrate into current business practices.

VDOT RESILIENCE TOOLS

Identify Vulnerable Infrastructure

Visualization Tool

Options to Address/Mitigate Vulnerability

- Adaptive Design Criteria
- ✓ Structures & Bridge Manual Published Chapter 33

Enhanced Design Criteria for At Risk Infrastructure – incorporating forward looking conditions

Structure & Bridge

- S&B Chapter 33: Considerations of Climate Change and Coastal Storms (Feb 2020, Rev 2022)
 - Salinity: corrosion resistant materials
 - Rainfall intensity and discharge: 20% increase deck drainage; 200-yr flood scour and buoyancy calcs
 - SLR: MHT increased by 4 ft in tidal locations; low chord at least 2 ft above MHT

RESILIENCE TOOLBOX – Resilience Practices

Adaptive Design Criteria

Enhanced Design Criteria for At Risk Infrastructure – incorporating forward looking conditions

Hydraulics – Draft Chapter

- Precipitation Increase and Projected IDF
 - Curves Considerations for design of drainage and stormwater conveyance systems

Materials – Draft Chapters

- Pavement design considerations
- Slope and embankment design considerations

Environmental – Draft Reference Manuals

- Natural and Nature Based Solutions
- Other Physical Enhancements

I-64 Hampton Roads Bridge Tunnel (HRBT) Expansion Project

VDDT Virginia Department of Transportation

- 2020 2026/27
- First bored tunnel for Virginia
- Design/Build Project
- Project Funding:

 92% regional gas and sales tax

 8% - state and federal funds

Climate change and coastal storms considerations

- Higher structures to accommodate sea level rise (5-10 ft)
- Floodgates in the tunnels were designed for the effects of storm surge plus an additional 5 feet
- Increased number of scuppers/deck drainage to account for increase in precipitation

Climate change and coastal storms considerations

- Use of corrosion resistant and corrosion free materials
- Concrete piles: carbon fiber or stainless steel prestressing strands
- Pier caps: stainless steel reinforcement & low permeable concrete
- Pre-stressed concrete bulb tee girders: carbon fiber prestressing strands & low carbon chromium shear reinforcement with low permeable concrete
- Bridge Deck: stainless steel reinforcing steel with low cracking concrete

Maria Mutuc, PE

Resilience Program Manager

Save the Dates!

A bimonthly webinar series, Wednesdays at 2:00 PM EST

Next Webinar

Wednesday, June 18th, 2025 – 2:00 PM EST

Topic: Risk Management Plans in TAMPs.

More to follow!
